HAND & FOOT CARE AGE DEFYING | EXPERT LED | RESULTS-DRIVEN.

Why Margaret Dabbs London foot treatments are undertaken on dry skin?

- Foot filing should always be undertaken on dry skin for optimum results; wet skin masks the area and makes the tissues soggy and due to this, the file will roll over the skin rather than grip properly.
- Skin is weakened by bathing the foot and is more likely to tear after it has been bathed. This is especially so if the skin is in anyway prone to cracks.
- The results are much longer lasting and easier for the therapist to achieve excellent results.
